

Logging into Qualfon VPN via Cisco AnyConnect

Introduction

Process details how to log into the Qualfon VPN through Cisco AnyConnect.

Details

1. Double click on the “**Cisco AnyConnect**” icon on your desktop..
2. Type **vpn.qualfon.com** in the Connection box (Next time this will appear automatically).

3. Click on **Connect**.
4. After a second, a pop-up will come up to enter your Qualfon domain credentials.
5. On the **GROUP** dropdown, please choose: **QUALFON** same as below.

6. Enter the **Username** and **Password** and click **Ok**.
7. A Duo pop-up request will appear on your smartphone requesting to **Approve** or **Decline** the authorization request.
8. Select **Approve** if you are actively trying to login the Qualfon VPN. Upon approval the connection to the Qualfon internal network will be complete.
 - A. If the system is having issues connecting you may get prompted a 2nd time for the Duo

Approval before the VPN will finally connect.

9. If everything goes well, you'll see a blue pop-up in the bottom right.
