# Cisco Umbrella Overview

## Introduction

The following page contains information over the Cisco Umbrella.

## Details

### What Is Cisco Umbrella?

**Cisco Umbrella** is a cloud-based security tool that helps protect you from online threats like:

- Malware
- Phishing
- Ransomware
- Harmful websites

Think of it as a **protective filter** for your internet connection — keeping you safe whether you're working in the office or remotely.

### What It Does for You

- **Blocks bad websites** before they load
- **Scans web traffic** for hidden threats
- **Stops risky connections**
- **Monitors cloud apps** like Office 365

### Why It Matters

- Works wherever you are — no VPN needed
- Reduces risk of getting hacked or tricked by fake sites
- Helps enforce company policies (e.g., blocks adult/gambling sites)
- Easy to set up — just routes your internet traffic through Cisco Umbrella

### In Short

**Cisco Umbrella = Smart, cloud-based protection for your internet activity.**
It keeps you safe, no matter where you work.
