Installing Cloudflare from Company Portal

Introduction

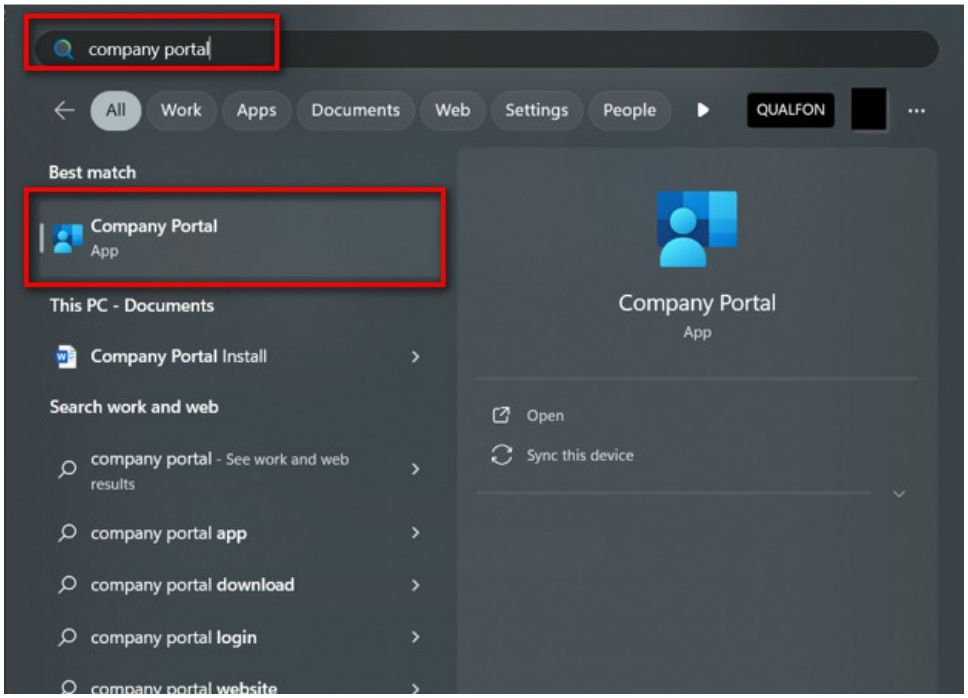

This page shows how to install Cloudflare One Client from the Company Portal app. Cloudflare is Qualfon's replacement for Cisco Umbrella and Cisco AnyConnect VPN.

Details

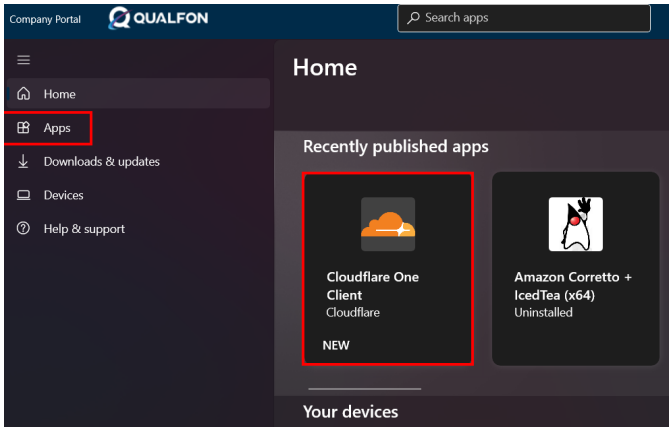

1. Click the **Start Menu** on the bottom **taskbar** and search for **Company Portal**.

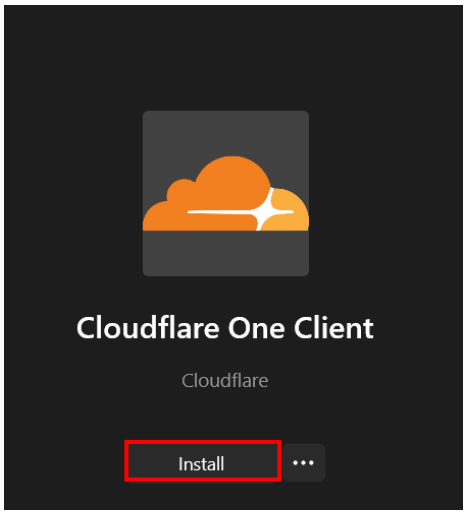

2. Alternatively, in the Search box, type ***Company Portal*** and open the App.

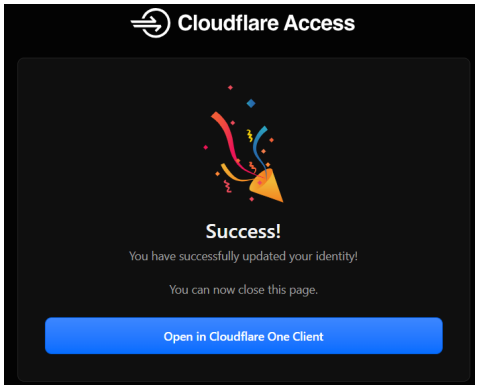

3. When Company Portal opens, it will automatically sign you in with your Qualfon account or prompt you to sign in.
4. To install Cloudflare, click ***Apps*** on the left side, or look under **Recently Published Apps.**

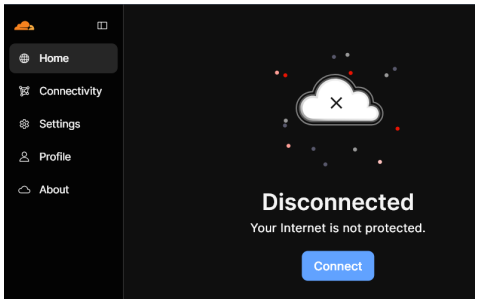

5. Click into it, then **Install.**

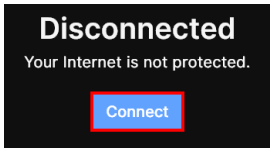

6. This will uninstall Cisco Umbrella and AnyConnect VPN, then install Cloudflare One Client.
7. When completed, it will open Cloudflare and a web browser to sign you in or ask you to sign in.

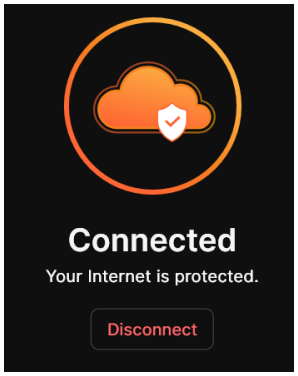

8. Click **Connect.**

9. After it connects, it will automatically use this connection; no need to log in daily.

10. Setup is complete. Cloudflare will connect automatically, so you can continue working as usual without connecting to the VPN.
